Henri Cartan - Wikipedia -

In mathematics, a sheaf is a
tool for systematically
tracking locally defined
data attached to the open
sets of a topological space.
The data can be restricted to
smaller open sets, and the
data assigned to an open set
is equivalent to all
collections of compatible
data assigned to collections
of smaller open sets
covering the original one.

Wikipedia - Empedocles of
Acragas (c. 492-432 BC)

Inventor of rhetoric and
borderline charlatan. His
arbitrary explanation of
reality with 4 elements
(Earth, Air, Fire and Water)
and 2 forces (Love and
Strife) dominated Western
thought for over two
millenia. 297 Giants of
